

Backup Notice

For users of EDGE Laser Printing Systems

One of the most essential tasks in maintaining PC-based software products is **Recovery**. There always seems to be that one time, no matter how careful we are that the software product, so critical to the day-to-day operations of our business, just will not work. General operating errors, file corruption, power outages and so forth can cause software products to fail. Recovery is often painful.

Your EDGE laser printing systems are no different. EDGE systems can be rendered inoperable due to errors with hardware and other software products beyond the control of EDGE.

EDGE is a living system. A living system is a program that has internal databases, such as bank databases, company databases, print option databases, check registers, audit files, and security that are updated and changed on a regular basis. All living systems must be backed up regularly. Without a proper backup procedure in place, the recovery of the EDGE system in an emergency would be extremely difficult and time-consuming.

We strongly suggest that you or someone on your technical support staff back up your edge system on a regular basis, at least once each week.

Simply copy the entire c:\Ultimate_EDGE for installation on a local workstation, or \\ShareName\Ultimate_EDGE for installations on a network. This will ensure that if a recovery is needed, all information will be current within one week's time.

Please be aware that, under the terms of the EDGE Systems Software License Agreement, you must be responsible for the regular backup of your main EDGE directories and subdirectories. Programming that the EDGE Technical Staff must perform to restore a system that does not have a current backup will be a billable service.
